About

In short, I want to create beautiful and fast websites or applications. Explore new technologies and innovations in this field every time. See you at the interview :)

Experience

Freelance

12/2019 - 02/2020

I started learning HTML/CSS in school. But I first started taking commercial orders in 2019. I didn't understand a lot of things then, like CMS, Frameworks, etc. But with each project I learned new features, preprocessors and extensions

Front End Developer · Restudio Development

02.2020 - 08.2021

My first official experience. Before this company, I worked as a freelancer and did quick projects. This is where I started to learn about things like CMS. Namely OpenCart.

I started to learn PHP and make online shops. In total I implemented 4 projects. Working in a team proved helpful for me, as it came in handy in later companies.

The main essence of the work was to create online stores according to the layout. The designer did the layout in Adobe XD. After which I transferred it to reality.

Also worked with Smarty (Template Compiler for PHP).

Frontend Developer - UI/UX Designer · WALKERS BCA

08.2021 - 07.2022

This is where I was first introduced to Wordpress. I have implemented around 11 projects. Worked with SEO optimisation, buying a domain and then hosting it and setting up a database, transferring information to the CRM. There was also a project using Next.js after which I started studying React.js.

I also tried my hand at UI/UX design. Made redesign of the company's website and one client's website. The last project in design was the creation of a visual application for a cafe.

In this company I got a huge experience in project implementation, starting from negotiations with clients, up to the delivery of the project.

Frontend Developer · Remote Helpers

12/2021 - 07/2022

Outstaffing the company where I continued my study of WP. Implemented about 4 projects. Also worked with a customer for about 5 months on an LMS platform in Austria. Consequently, I was communicating in working English every day. The platform was built on Learndash as well as integration with WooCommerce and Zoho CRM.

Education

Uzhgorod School #5 - Secondary education

2006 - 2017

A comprehensive school with an extensive study of foreign languages. It was there that I first learned about programming, starting to study Pascal and HTML

Uzhgorod National University - Master of Cybersecurity

2017 - 2022

Cybersecurity has given me a broader knowledge of information technology and programming in general. It has been useful for me in website security situations as well as for testing
